

Module	Content	Duration/hours		Teacher	Compul- sory/ Compulsor y Optional Subject	Prerequisites	Number of credits	Conditions for passing
		Lectures	Practice/ Self- study					
History of glass production, properties of glass and glass-forming melts	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• brief introduction to the history of glass production,</li> <li>• glass structure, crystallization, and phase separation,</li> <li>• properties of glass and glass-forming melts:               <ul style="list-style-type: none"> <li>○ viscosity,</li> <li>○ density,</li> <li>○ surface tension,</li> <li>○ thermal properties,</li> <li>○ mechanical properties,</li> <li>○ electrical properties,</li> <li>○ optical properties,</li> <li>○ chemical resistance,</li> <li>○ influence of composition on glass properties.</li> </ul> </li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Has theoretical knowledge in the history of glass production.</li> <li>• Understands the structure of glass.</li> <li>• Knows the most important properties of glass and glass-forming melts.</li> </ul>	12	0/40	Ing. Jozef Kraxner, PhD., Dr. Arish Dasan, Dr. Akansha Mehta, Mokhtar Mahmoud, MSc.	Compulsory	Fundamentals of the technology of inorganic materials	2	Passing the final knowledge test (100 %, achieved min. score 75%)
Glass production technology	<p><b>Content:</b></p> <p><b>Theoretical part:</b></p> <ul style="list-style-type: none"> <li>• basic raw materials for glass production, types of glass, special glasses,</li> <li>• melting and shaping,</li> <li>• furnace technology,</li> <li>• refractory materials,</li> <li>• defects in glass,</li> <li>• additive manufacturing-3D printing.</li> </ul> <p><b>Practical part:</b></p> <ul style="list-style-type: none"> <li>• calculation and preparation of a glass batch,</li> <li>• melting of glass in laboratory conditions,</li> <li>• preparation of glass microspheres,</li> <li>• preparation of 3D glass structures using additive manufacturing technology,</li> <li>• glass surface treatment by ion exchange.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Has theoretical and practical knowledge on glass production technology.</li> <li>• Recognizes the main types of industrially produced and special types of glass.</li> </ul>	15	20/30	Ing. Jozef Kraxner, PhD., Dr. Arish Dasan, Dr. Akansha Mehta, Mokhtar Mahmoud, MSc.	Compulsory Optional	History of glass production, properties of glass and glass-forming melt	3	Passing the final knowledge test (60 %, achieved min. score 75%) Protocol from practical exercise (40 %)

	<ul style="list-style-type: none"> <li>• Gains practical skills in the preparation of glass by melting, and preparation of glass microspheres by flame synthesis.</li> <li>• Masters the fundamentals of preparation of 3D structures using additive manufacturing technologies.</li> <li>• Masters the fundamentals of glass surface treatment by ion exchange in the laboratory.</li> </ul>							
Sintering	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• Types of sintering, driving force of sintering, diffusion, defects and chemistry of defects.</li> <li>• Sintering mechanisms I: solid phase sintering, liquid phase sintering, grain growth.</li> <li>• Sintering mechanisms II: Viscous flow sintering and crystallization.</li> <li>• Assisted sintering: Pressure, Electric field, Cold sintering.</li> <li>• Practical application of sintering techniques (PBL).</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Understands the principles and can choose suitable sintering method.</li> <li>• Understands the mechanisms of sintering and the influence of sintering conditions.</li> <li>• Can analyze the results of a simple sintering experiment.</li> </ul>	8	24/30	Dr. Ali Talimian, Dr. Monika Micháľková	Compulsory Optional	Physical Chemistry; Thermal analysis I; Fundamentals of the technology of inorganic materials	3	Oral exam (40 %) PBL protocol (60%)
Excursion	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• Completing an excursion in a company operating in the field of glass production and processing, e.g.: RONA a.s., Lednické Rovne.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Expands his/her theoretical knowledge with a practical demonstration of glass production and processing in a glass company.</li> </ul>	0	8/0	Ing. Jozef Kraxner, PhD., Dr. Arish Dasan, Dr. Akansha Mehta, Mokhtar Mahmoud, MSc.	Compulsory Optional	Not necessary for this module	1	Attendance (100 %)
Nanomaterials for anti-corrosion coatings	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• methods and ways of corrosion protection,</li> <li>• highly effective coatings,</li> <li>• hybrid nanocomposites: optimization to achieve a highly crosslinked structure,</li> <li>• Sol-gel coatings,</li> <li>• overview of multifunctional coatings.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Is able to interpret basic electrochemical data.</li> <li>• Is competent to compare the effectiveness of various anti-corrosion coatings.</li> <li>• Possesses basic knowledge of hybrid nanocomposites, their structure and methods of their synthesis.</li> </ul>	4	6/15	Ing. Milan Parchovianský, PhD.	Compulsory Optional	Fundamentals of colloidal chemistry	1	Presentation of results from practical exercises and answering the examiner's questions (60 %) Preparation of a protocol from a laboratory exercise (40 %)

	<ul style="list-style-type: none"> <li>• Possesses basic knowledge on intelligent multifunctional coatings.</li> </ul>							
Nanomaterials for biomedical applications	<p><b>Content:</b></p> <p>Part 1. Introduction to nanomaterials and nanostructures</p> <ul style="list-style-type: none"> <li>✓ Top-down and bottom-up approaches</li> <li>✓ Classification of nanomaterials</li> <li>✓ Dimensional classification of nanomaterials</li> <li>✓ Types of nanomaterials based on their structure</li> <li>✓ Types of nanomaterials based on their composition</li> </ul> <p>Part 2. Synthesis of nanomaterials (Methods - brief description)</p> <ul style="list-style-type: none"> <li>✓ Sol-gel (explained in detail in another course)</li> <li>✓ Microemulsion</li> <li>✓ Hydrothermal and Solvothermal synthesis</li> <li>✓ Electrospinning</li> <li>✓ Others</li> </ul> <p>Part 3. Characterization of nanomaterials (brief description)</p> <ul style="list-style-type: none"> <li>✓ Transmission electron microscopy (TEM)</li> <li>✓ Scanning electron microscopy (SEM)</li> <li>✓ Thermogravimetric analysis (TGA)</li> <li>✓ Raman and infrared (IR) spectroscopy</li> <li>✓ X-ray diffraction (XRD)</li> <li>✓ N<sub>2</sub> sorption (BET)</li> <li>✓ Nuclear magnetic resonance (NMR)</li> <li>✓ Zeta potential</li> <li>✓ Contact angle</li> </ul> <p>Part 4. Biological properties and characterization of nanomaterials.</p> <ul style="list-style-type: none"> <li>✓ Bioactivity, biocompatibility, degradability</li> <li>✓ Bioactive glass</li> <li>✓ Intracellular signal modulation</li> <li>✓ Other cellular mechanisms induced by nanomaterials</li> <li>✓ Cell type specificity and sensitivity</li> </ul> <p>Part 5. Biomedical applications of nanomaterials</p> <ul style="list-style-type: none"> <li>✓ Antibacterial and antimicrobial nanomaterials</li> <li>✓ Drug delivery systems</li> <li>✓ Hyperthermia</li> <li>✓ Bioimaging</li> <li>✓ Biosensors</li> <li>✓ Photothermal therapy</li> <li>✓ Theranostic nanoplateforms</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Gains theoretical knowledge about nanomaterials.</li> </ul>	6	30/30	Dr. Zulema Vargas Osorio, RNDr. Eva Vidomanová, PhD ., Dr. Germán A. Clavijo Mejia	Compulsory Optional	Fundamentals of the technology of inorganic materials	3	Active participation in lectures. Presentation of results from practical exercises and answering the examiner's questions (60 %) Preparation of a protocol from a laboratory exercise (40 %)

	<ul style="list-style-type: none"> <li>• Gains theoretical knowledge about the different synthetic routes and characterization techniques for the study of nanomaterials.</li> <li>• Gains theoretical knowledge about the biological assessment of nanomaterials.</li> <li>• Gains theoretical knowledge about the biological applications of nanomaterials.</li> <li>• Can independently perform the synthesis of nanomaterials for a determined application.</li> </ul>							
Nanomaterials for optical applications	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• Basic concepts: Wave optics and wave mechanics: Schrödinger and Helmholtz equations.</li> <li>• Overview of quantum mechanics: interactions of light and matter.</li> <li>• Time-dependent perturbation theory.</li> <li>• Confined light and quantum electrodynamics.</li> <li>• Basic concepts of nonlinear surface optics.</li> <li>• Nonlinear optical spectroscopy: surface conditions of semiconductors, metal quantum wells (quantum wells).</li> <li>• Optical properties of low-dimensional semiconductors.</li> <li>• Applications: Planar photonic crystals and photonic crystal optical fibers.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Gains the ability to interpret basic concepts about the optical properties of nanomaterials.</li> <li>• Has a basic knowledge of nonlinear optics, quantum constraints and its effect on optical properties.</li> <li>• Has a basic knowledge of semiconductor and photonic crystals.</li> </ul>	6	6/30	doc. Dr. José Joaquín Velázquez García	Compulsory Optional	Fundamentals of colloidal chemistry	2	<p>Presentation of results from practical exercises and answering the examiner's questions (60 %)</p> <p>Preparation of a protocol from a laboratory exercise (40 %)</p>
Sol-gel and Surface modification of nanoparticles	<p><b>Content:</b></p> <p>Part 1: Sol-gel</p> <ul style="list-style-type: none"> <li>• Sol-gel chemistry</li> <li>• Precursors for sol-gel</li> <li>• Definition of sol</li> <li>• Definition of gel</li> <li>• Gel point definition</li> <li>• Sol-gel reactions</li> <li>• Sol-gel mechanism</li> <li>• Sol-gel procedure stages</li> <li>• Sol-gel approaches</li> <li>• Parameters that affect the sol-gel mechanism</li> <li>• Advantages of sol-gel</li> <li>• Limitations and disadvantages of sol-gel</li> </ul> <p>Part 2: Surface modification</p> <ul style="list-style-type: none"> <li>• Introduction</li> </ul>	6	30/30	Dr. Zulema Vargas Osorio, Dr. Si Chen	Compulsory Optional	Fundamentals of colloidal chemistry	3	<p>Active participation in lectures.</p> <p>Presentation of results from practical exercises and answering the examiner's questions (60 %)</p> <p>Preparation of a protocol from a laboratory exercise (40 %)</p>

	<ul style="list-style-type: none"> <li>✓ Covalent methods</li> <li>✓ Non-covalent adsorption</li> <li>✓ Others</li> <li>✓ Secondary modification</li> </ul> <p>Part 3: Silica-based mesoporous organic-inorganic hybrid materials</p> <ul style="list-style-type: none"> <li>✓ Surfactants</li> <li>✓ Surfactants classification</li> <li>✓ Micelles and CMC</li> <li>✓ Micelles formation</li> <li>✓ Parameters that affect micelles formation</li> <li>✓ Morphological aspects of amphiphile assembly</li> <li>✓ Surfactants as structure-directing agents (SDA)</li> <li>✓ Advantages of solvent extraction for surfactant removal</li> <li>✓ Organic-inorganic interactions: surfactant-precursor species</li> <li>✓ Organically Functionalized Mesoporous Silica Phases</li> <li>✓ Advantages of functionalization</li> <li>✓ Postsynthetic Functionalization of Silicas ("Grafting")</li> <li>✓ Co-condensation (Direct synthesis)</li> <li>✓ Co-condensation (Direct synthesis)_Disadvantages</li> <li>✓ Periodic Mesoporous Organosilicas (PMOs)</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Gains theoretical knowledge about sol-gel and surface modification of nanoparticles.</li> <li>• Can independently perform the synthesis of nanoparticles using sol-gel.</li> <li>• Can organically modify the surface of nanoparticles to tailor their properties.</li> </ul>							
Introduction to analytical methods	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• analytical methods used to determine the chemical composition of materials,</li> <li>• criteria for selection of the analytical method,</li> <li>• dictionary of Analytical Chemistry,</li> <li>• steps included in the measurement process,</li> <li>• steps involved in the evaluation of analytical data,</li> <li>• importance of sampling,</li> <li>• design and implementation of a sampling plan,</li> <li>• ,</li> <li>• dissolution and decomposition techniques.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Gains theoretical knowledge and confidence to design his/her own criteria for selecting an appropriate analytical</li> </ul>	4	0/40	Ing. Dagmar Galusková, PhD., Ing. Hana Kaňková, PhD.	Compulsory	Atom structure and chemical bond theory	2	Compulsory attendance at lectures, passing written/or oral exam (100 %, achieved min.score 75%)

	<p>method and to solve common scientific analytical problems.</p> <ul style="list-style-type: none"> <li>Gains theoretical knowledge and confidence in designing a sampling plan and sample preparation procedure.</li> </ul>							
Methods of chemical analysis: ICP OES	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>Principles of liquid sample dosing in ICP spectrometry.</li> <li>Sample requirements and preparation for the measurement.</li> <li>ICP OES method used in quantitative analysis of materials</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>Gains theoretical knowledge of ICP techniques and an overview of their possibilities in quantitative chemical analysis of materials.</li> <li>Gains basic practical skills in sampling and their preparation, processing and evaluation of data using the instrumental technique ICP OES.</li> </ul>	2	8/40	Ing. Dagmar Galusková, PhD., Ing. Hana Kaňková, PhD., Ing. Lenka Buňová, PhD.	Compulsory Optional	Atom structure and chemical bond theory, Introduction to analytical methods	2	Compulsory attendance at the practical exercise, passing written/ or oral exam (60 %, achieved min. score 75%) Protocol from practical exercise - sample preparation and analysis (40 %)
Methods of chemical analysis: X-ray fluorescence	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>introduction: application and limitations of XRF,</li> <li>XRF principles:</li> <li>sample types for XRF: advantages, limitations, preferences,</li> <li>sample preparation and chemical analysis of the selected sample by XRF.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>Masters theoretical and basic practical knowledge of XRF instrumentation and has an overview of the possibilities of using XRF in the characterization of materials.</li> <li>Gains practical and basic skills in preparation of a sample, understands the measurement.</li> <li>Can process and evaluate the measured data.</li> </ul>	2	6/30	Ing. Hana Kaňková, PhD.	Compulsory Optional	Atom structure and chemical bond theory; Introduction to analytical methods	2	Compulsory attendance at practical lectures, passing the final written exam (60 %, achieved min. score 75%) Protocol from practical exercise - sample preparation and analysis (40 %)
Electron microscopy	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>introduction and overview of the use of electron microscopy methods (SEM),</li> <li>electron beam and sample interactions,</li> <li>image creation and resolution,</li> <li>analysis and detection of X-rays,</li> <li>limitations of chemical analysis using SEM / EDS / WDS.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>Gains theoretical and basic practical knowledge of SEM instrumentation.</li> <li>Gains an overview of the possibilities of using SEM in the characterization of materials.</li> </ul>	4	8/15	Mgr. Peter Švančárek, PhD.	Compulsory Optional	Atom structure and chemical bond theory; Introduction to analytical methods	1	Compulsory attendance at lectures, passing the final knowledge test (60 %, achieved min. score 75%) Protocol from practical exercise - sample preparation and analysis (40 %)

	<ul style="list-style-type: none"> <li>Has basic practical skills in preparation of a sample, making measurements and processing the data.</li> </ul>							
X-ray powder diffraction	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>principles of X-ray powder diffraction,</li> <li>interaction of X-rays with matter,</li> <li>diffraction and scattering,</li> <li>X-ray experiment design (Bragg-Brentano, SAXS, WAXS),</li> <li>phase composition identification, texture analysis and degree of crystallinity,</li> <li>sample preparation, sample measurement, data evaluation.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>understands the basic principles and theory of powder X-ray diffraction,</li> <li>understands the role of optics in the path of the primary and diffracted beam,</li> <li>can independently prepare a sample for measurement,</li> <li>independently controls the basic functions of the X-ray powder diffractometer,</li> <li>can perform independently a measurement at room temperature,</li> <li>can evaluate data (phase identification and determination of qualitative and semi-quantitative phase composition of an unknown sample).</li> </ul>	2	8/15	Mgr. Michal Žitňan, PhD., <b>prof. Ing. Dušan Galusek, DrSc.</b>	Compulsory Optional	Atom structure and chemical bond theory; Introduction to analytical methods	1	Compulsory attendance at lectures, passing the final knowledge test (60 %, achieved min. score 75%) Protocol from practical exercise - sample preparation and analysis (40 %)
Thermal analysis I	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>principles and methods of thermal analysis (DTA, DSC, TG, TMA),</li> <li>thermal phenomena,</li> <li>instrumentation,</li> <li>familiarization with instrumentation, health and safety,</li> <li>basic requirements for measured samples in terms of accuracy of analysis,</li> <li>the importance and support of the accuracy of measurements using XRD, PSA, HT XRD, SEM a SEM EDX analysis,</li> <li>crushing, sieving, washing of samples, drying, weighing,</li> <li>basic requirements for measurement settings to obtain relevant data,</li> <li>work with software for measuring and evaluating data, defining programs for calibrations, corrections and simple measurements of samples,</li> </ul>	6	19/20	Ing. Anna Prnová, PhD., Ing. Monika Micháliková, PhD., Ing. Beata Pecušová, PhD., <b>doc. Ing. Mária Chromčíková, PhD.</b>	Compulsory Optional	Physical Chemistry; Fundamentals of the technology of inorganic materials	2	Compulsory participation in lectures / seminars / laboratory exercises, Final test (weight 60%, achieved min. score 75%) Laboratory exercise protocol (weight 40%)

	<ul style="list-style-type: none"> <li>• work with software for measuring and evaluating data, defining programs for basic analysis of model glasses and amorphous solids using DTA, DSC, TMA and TG,</li> <li>• data evaluation and interpretation,</li> <li>• evaluation of TMA and TG curves, weight loss,</li> <li>• evaluation of DSC and DTA curves (determination of basic parameters describing thermal effects), processing of measured data for publication.</li> </ul> <p><b>Learning Outcomes:</b> Graduate:</p> <ul style="list-style-type: none"> <li>• Gains basic information and skills in the field of thermal analysis of glasses and amorphous materials.</li> <li>• Can plan analysis, evaluate measured data.</li> </ul>							
Thermal analysis II.	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• Methods of obtaining relevant data for the study of crystallization kinetics.</li> <li>• Control and data processing for model calculations.</li> <li>• Calculations of kinetic data for model glasses, work with the software Kinpar (Netzsch).</li> </ul> <p><b>Learning Outcomes:</b> Graduate:</p> <ul style="list-style-type: none"> <li>• Gains knowledge and skills in planning analyzes and evaluating measured data for the study of crystallization kinetics of glass.</li> <li>• Knows the criteria for selecting a suitable method for calculating the kinetic parameters of crystallization.</li> <li>• Can correctly determine the kinetic parameter of crystallization such as apparent activation energy, frequency factor, Avrami coefficient.</li> <li>• Masters the JMAK method for assessing the crystallization behavior of glasses.</li> </ul>	2	8/30	Ing. Anna Pρνová, PhD., <b>doc. Ing. Mária Chromčíková, PhD.</b>	Compulsory Optional	Thermal analysis I; Physical Chemistry; Fundamentals of the technology of inorganic materials	2	Compulsory participation in lectures / seminars / laboratory exercises, Final test (weight 60%, achieved min. score 75%) Laboratory exercise protocol (weight 40%)
Thermodynamics of electrochemical systems	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• electrolysis and Faraday's law,</li> <li>• thermodynamics of galvanic cells,</li> <li>• Nernst's equation,</li> <li>• basics of electrochemical corrosion.</li> </ul> <p><b>Learning Outcomes:</b> Graduate:</p> <ul style="list-style-type: none"> <li>• Can identify cathodic and anodic reactions and calculate a mass transfer.</li> <li>• Can identify galvanic pair and predict the extent of corrosion.</li> <li>• Has a basic knowledge of thermodynamic equilibrium (electromotive force of the cell).</li> <li>• Has practical knowledge of electrode polarization and differential air corrosion.</li> </ul>	8	5/15	TBA	Compulsory Optional	Physical Chemistry; Fundamentals of the technology of inorganic materials	1	Laboratory exercise protocol (weight 100 %)

Fundamentals of mathematical statistics	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• basic types of data and their properties,</li> <li>• verification of data distribution and normality,</li> <li>• basic descriptive data statistics,</li> <li>• null hypothesis, level of significance, level of probability.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Can independently assess the nature of the data during the design of the experiment.</li> <li>• Knows the methods of basic statistical data processing.</li> <li>• Has practical skills in verifying the nature of the measured data.</li> <li>• Has basic skills in using online statistical applets.</li> <li>• Has a basic knowledge of the interpretation of measured data.</li> </ul>	12	12/30	RNDr. Vladimír Meluš, PhD. MPH	Compulsory	Not necessary for this module	2	Exam - <b>online e-test</b> (weight 100 %)
Mathematical statistics: practical application	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• parametric and non-parametric tests,</li> <li>• categorical data, contingency tables,</li> <li>• regression and correlation,</li> <li>• confidence intervals, interpretation of results.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Can independently select and use a specific statistical tests.</li> <li>• Can correctly process graphic attachments (tables, box graphs).</li> <li>• Has advanced skills in using online statistical applications.</li> <li>• Can independently interpret the data, taking into account the nature of the phenomenon under study.</li> </ul>	12	12/30	RNDr. Vladimír Meluš, PhD. MPH	Compulsory Optional	Fundamentals of mathematical statistics	2	Exam - <b>online e-test</b> (weight 100 %)
Mathematical statistics: case studies	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• design of experiment in terms of requirements of a statistical test,</li> <li>• multidimensional statistical methods,</li> <li>• the difference between mathematical-statistical significance and significance in terms of the actual benefit of the tested parameter.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Can independently apply statistical methods in solving scientific problems and specific tasks in solving his dissertation.</li> <li>• Can independently interpret the results of experimental work in a broader context.</li> <li>• Can assess the adequacy of statistical analysis in other scientific published works and compare them with his/her own results.</li> </ul>	12	12/30	RNDr. Vladimír Meluš, PhD. MPH	Compulsory Optional	Fundamentals of mathematical statistics	2	Exam - <b>online e-test</b> (weight 100 %)

Fundamentals of computational chemistry	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• introduction to computer simulations and their application in chemistry,</li> <li>• bases of atomic functions in MO-LCAO,</li> <li>• introduction to the method of density functional theory (DFT),</li> <li>• quantum - chemical simulations of the properties of atoms and molecules.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• knows how to use quantum - chemical simulations in practice,</li> <li>• acquires basic knowledge for working with quantum - chemical programs,</li> <li>• has the basic knowledge necessary for creating utilities (scripts).</li> </ul>	8	16/30	Dr.h.c. prof. Ing. Marek Liška, DrSc., <b>doc. Ing. Róbert Klement, PhD., doc. Amirhossein Pakseresht, PhD.</b>	Compulsory Optional	Physical Chemistry	2	<ul style="list-style-type: none"> <li>• Test (weight 100%, achieved min.score 75%)</li> </ul>
Fundamentals of colloidal chemistry	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• Basic definitions and terms from colloidal chemistry and surface chemistry (colloid classification, intermolecular forces, interaction forces in colloidal systems, phase transitions and phase structure).</li> <li>• Liquid-gas and liquid-liquid interfaces and monolayers. Classification and significance of mono- and polylayers.</li> <li>• Thermodynamics of adsorption at gas-solid phase and liquid-solid phase interfaces. Adsorption in several layers, in porous solids, on the surface of crystals, Langmuir-Blogett film.</li> <li>• General characteristics of colloidal systems.</li> <li>• Surface of very small particles.</li> <li>• Charged surfaces. Coagulation and flocculation kinetics.</li> <li>• Emulsions: preparation, emulsification kinetics, stability, concentrated emulsions, multicomponent emulsions.</li> <li>• Suspensions: types, stabilization, effect of additives.</li> <li>• Aerosols: liquid aerosols, theory of droplet formation, formation of liquid aerosols by condensation, solid aerosols, decomposition of aerosols.</li> <li>• Gels: types, structure, properties, applications.</li> <li>• Gel casting: principles, polymerization of monomers, factors influencing polymerization.</li> <li>• Simulation of colloidal systems in thermodynamic equilibrium: general characteristics of simulation methods, MonteCarlo method, molecular dynamics, Brown molecular dynamics.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• has basic knowledge in the field of colloidal chemistry,</li> </ul>	12	8/30	doc.Dr. José Joaquín Velázquez García, <b>doc. Ing. Róbert Klement, PhD., Dr. Ali Najafzadeh,</b>	Compulsory Optional	Physical Chemistry	2	<p>Active participation in lectures.</p> <ul style="list-style-type: none"> <li>• Test (Weight 60%, achieved min. score 75%)</li> <li>• Elaboration of a thematic essay with a search of journal literature in the range of 15-20 pages on a topic related to the topic of the dissertation thesis, including a discussion of the results obtained in the exercise (weight 40%)</li> </ul>

	<ul style="list-style-type: none"> <li>• has the ability to independently perform synthesis of materials in different types of colloidal systems: emulsions, aerosols and gels,</li> <li>• can independently assess the adequacy of simulation methods for the investigated colloidal systems.</li> </ul>							
Colloidal systems: characterization and utilization	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• rheological properties of dispersion systems - viscosity, non-Newtonian fluids,</li> <li>• optical properties of dispersion systems - light scattering: Rayleigh theory, Mie's theory,</li> <li>• electrical properties of dispersion systems - electrical bilayer, electrokinetic phenomena, electrocapillary phenomena.</li> <li>• determination of <math>\zeta</math>-potential.</li> <li>• viscoelectric effect,</li> <li>• other characterization techniques: microscopy, spectroscopy, calorimetry,</li> <li>• technological applications of solubilization phenomena in colloidal systems,</li> <li>• applications of dispersion systems in processes of nanomaterial synthesis,</li> <li>• analytical applications of colloidal systems,</li> <li>• sensors.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Has a basic knowledge of techniques for characterizing colloidal systems.</li> <li>• Can work independently in the laboratory and can independently interpret the results of experimental work in the broader context of colloidal systems.</li> <li>• Can select appropriate characterization techniques and use them in the characterization of colloidal systems.</li> <li>• Can compare and develop colloidal systems for specific applications.</li> </ul>	8	10/30	doc. Dr. José Joaquín Velázquez García, <b>doc. Ing. Róbert Klement, PhD.,</b> Dr. Ali Najafzadeh, Dr. Ali Talimian	Compulsory Optional	Physical Chemistry Fundamentals of colloidal chemistry	2	<p>Active participation in lectures.</p> <ul style="list-style-type: none"> <li>• Test (Weight 60%, achieved min. score 75%)</li> <li>• Elaboration of a thematic essay with a search of journal literature in the range of 15-20 pages on a topic related to the topic of the dissertation thesis, including a discussion of the results obtained in the exercise (weight 40%)</li> </ul>
Theoretical principles of molecular spectroscopy	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• basic terms and definitions,</li> <li>• theoretical principles of molecular spectroscopy and instrumentation.</li> </ul> <p><b>Learning Outcomes:</b></p> <p>Graduate:</p> <ul style="list-style-type: none"> <li>• Masters the basic concepts and theoretical principles of molecular spectroscopy methods.</li> <li>• Understands the principles and understands the way electromagnetic radiation interacts with matter.</li> </ul>	15	0/40	<b>doc. Ing. Róbert Klement, PhD.,</b> Dr. Rajesh Dagupati	Compulsory	Physical Chemistry	2	<ul style="list-style-type: none"> <li>• Active participation in lectures.</li> <li>• Test (weight 100%, achieved score min. 75%)</li> </ul>

UV-vis-NIR spectroscopy	<p><b>Content:</b> Theoretical part:</p> <ul style="list-style-type: none"> <li>• basic terms and definitions, units,</li> <li>• Lambert-Beer law and its application,</li> <li>• KM function, Tauc graph, electron transitions in organic molecules, RE and TM ions,</li> <li>• the probability of spectral transitions and the relationship to the intensity of absorption,</li> <li>• selection rules, Frank-Condon principle, influence of solvent / matrix on the displacement and intensity of absorption bands,</li> <li>• instrumentation (transmittance and diffuse reflection),</li> <li>• basic calculations.</li> </ul> <p>Practical part:</p> <ul style="list-style-type: none"> <li>• Instrumentation and acquisition of spectra (solutions, solid samples) in transmission and diffusion reflectance.</li> <li>• Spectrophotometry- spectrophotometric measurement of chemical reaction kinetics.</li> <li>• Experimental data processing and interpretation.</li> </ul> <p><b>Learning Outcomes:</b> Graduate:</p> <ul style="list-style-type: none"> <li>• masters the basic principles of UV-vis-NIR spectrometry,</li> <li>• masters the appropriate experimental technique,</li> <li>• can independently measure, evaluate and interpret results.</li> </ul>	10	15/30	<p><b>doc. Ing. Róbert Klement, PhD.,</b> Dr. Rajesh Dagupati, Mgr. Michal Žitňan, PhD.</p>	Compulsory Optional	Theoretical principles of molecular spectroscopy	2	<ul style="list-style-type: none"> <li>• Active participation in lectures.</li> <li>• Test (weight 80%, achieved min. score 75%)</li> <li>• Practical demonstration of the use of the method (weight 20%)</li> </ul>
Photoluminescence spectroscopy	<p><b>Content:</b> Theoretical part:</p> <ul style="list-style-type: none"> <li>• basic terms and definitions, units,</li> <li>• theoretical foundations of fluorescence spectroscopy (Jablonsky diagram and photochemical / photophysical processes in matter, PL transitions in TM and RE ions, selection rules, luminescence quenching mechanisms, lifetime, quantum yield),</li> <li>• instrumentation (steady state and time-resolved PL spectroscopy).</li> </ul> <p>Practical part:</p> <ul style="list-style-type: none"> <li>• instrumentation and acquisition of spectra (solutions, solid samples) - excitation and emission spectra,</li> <li>• instrumentation and measurement of quenching time (solutions, solid samples),</li> <li>• quantum yield measurement,</li> <li>• experimental processing and interpretation of data.</li> </ul> <p><b>Learning Outcomes:</b> Graduate:</p> <ul style="list-style-type: none"> <li>• Masters the basic principles of photoluminescence spectroscopy.</li> <li>• Masters the appropriate experimental technique.</li> </ul>	10	20/40	<p><b>doc. Ing. Róbert Klement, PhD.,</b> Dr. Rajesh Dagupati, Mgr. Michal Žitňan, PhD.</p>	Compulsory Optional	Theoretical principles of molecular spectroscopy	3	<p>Active participation in lectures.</p> <ul style="list-style-type: none"> <li>• Test (weight 80%, achieved min. score 75%)</li> <li>• Practical demonstration of the use of the method (weight 20%)</li> </ul>

	<ul style="list-style-type: none"> <li>• Can independently measure, evaluate and interpret results</li> </ul>							
Infrared and Raman spectroscopy	<p><b>Content:</b> Teoretical part:</p> <ul style="list-style-type: none"> <li>• basic terms and definitions, units, theoretical foundations of vibrational spectroscopy (rotational, vibrational and vibrational-rotational spectra),</li> <li>• instrumentation (IR and Raman spectroscopy),</li> </ul> <p>Practical part:</p> <ul style="list-style-type: none"> <li>• IR spectrum measurement (various techniques, e.g.KBr, ATR),</li> <li>• measurement of Raman spectra,</li> <li>• experimental data processing and interpretation.</li> </ul> <p><b>Learning Outcomes:</b> Graduate:</p> <ul style="list-style-type: none"> <li>• Masters the basic principles of infrared and Raman spectroscopy.</li> <li>• Masters the appropriate experimental techniques.</li> <li>• Can independently measure, evaluate and interpret results.</li> </ul>	10	10/30	Dr.h.c. prof. Ing. Marek Liška, DrSc., Ing. Branislav Hruška, PhD., doc. Dr. José Joaquín Velázquez García, <b>doc. Amirhossein Pakseresht, PhD.</b>	Compulsory Optional	Theoretical principles of molecular spectroscopy	2	<ul style="list-style-type: none"> <li>• Consultations and test (weight 50%, achieved min. score 30%)</li> <li>• Seminar paper (weight 20%)•</li> <li>• Practical demonstration of the use of the method (weight 30%)</li> </ul>
Solid phase NMR spectroscopy	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• basic terms and definitions, units,</li> <li>• theoretical foundations of NMR spectroscopy and its applicability in materials research: chemical shift, spectral line / band and its width,</li> <li>• spectrum vs. structural motives,</li> <li>• examples of NMR spectra of glasses and polycrystalline materials,</li> <li>• data processing.</li> </ul> <p><b>Learning Outcomes:</b> Graduate:</p> <ul style="list-style-type: none"> <li>• masters the basic principles of NMR spectroscopy,</li> <li>• knows the scope of application of the method and can apply it to solve tasks related to the topic of his dissertation thesis.</li> </ul>	10	0/15	Dr. Gustavo Galleani,	Compulsory Optional	Theoretical principles of molecular spectroscopy	1	<ul style="list-style-type: none"> <li>• Active participation in lectures.</li> <li>• Test (weight 100%, achieved min. score 75%)</li> </ul>
XPS: X-ray photoelectron spectroscopy	<p><b>Content:</b></p> <ul style="list-style-type: none"> <li>• theoretical foundations of XPS and instrumentation,</li> <li>• sample preparation,</li> <li>• possibilities and limits of the technique in advanced materials research.</li> </ul> <p><b>Learning Outcomes:</b> Graduate:</p> <ul style="list-style-type: none"> <li>• masters the basic principles of XPS,</li> <li>• knows the scope of application of the method and can apply it to solve tasks related to the topic of his dissertation.</li> </ul>	10	0/15	Dr. Kamalan Kirubakaran, Dr. Omid Sharifahmadian	Compulsory Optional	Theoretical principles of molecular spectroscopy	1	<ul style="list-style-type: none"> <li>• Active participation in lectures.</li> <li>• Test (weight 100%, achieved min. score 75%)</li> </ul>
